Advanced Solutions for DLP

TrustView DRM positioning in DLP

Why DRM?

Most of DLP solutions can not control documents after delivery

Only access control

- If user passed the authentication, system allows legal users to access documents.

Lack of document control

- After receiving documents, users get full access right without any system control.
- System can not control user behaviors like copy, edit and print.
- Document features can be destroyed by converting

Document Loss Protection

Right People

Unauthorized user can not open confidential document

Right Time

On-line

Off-line

Reading time limits

Right Behavior

Reading

Printing

Saving

Editing
